

Application No. 10/627,676

IN THE CLAIMS:

Please amend Claims 1 as follows:

LISTING OF CURRENT CLAIMS

Claim 1. (Currently amended) A ~~socket~~ protective socket cover for preventing single-opening insertion comprising:

a housing having a plurality of insertion openings;

a sliding base assembled in the housing; the sliding base being capable of transverse sliding movements in the housing ~~established by restoring elastic means~~;

a plurality of covers ~~provided for corresponding with~~ disposed at corresponding positions of the insertion openings; the covers being capable of pivotal rotations and capable of restoring forces on the sliding base established by restoring elastic means disposed in the sliding base; and the covers ~~having further including~~ a plurality of blocking members for extending into the insertion openings of the housing;

when the blocking members at the covers are simultaneously pushed and departed from the insertion openings, the covers are pivotally rotated and tilted on the sliding base, and a subsequent force imposed upon the covers pushes the covers and the sliding base sideward; when the blocking members at the covers are not simultaneously pushed and departed from the insertion openings, ~~the other one of~~ the blocking members not pushed away from the insertion opening remains in the insertion opening and blocks displacement of the sliding base.
